

DeliverHealth

eSOne Mobile for Android v3.9

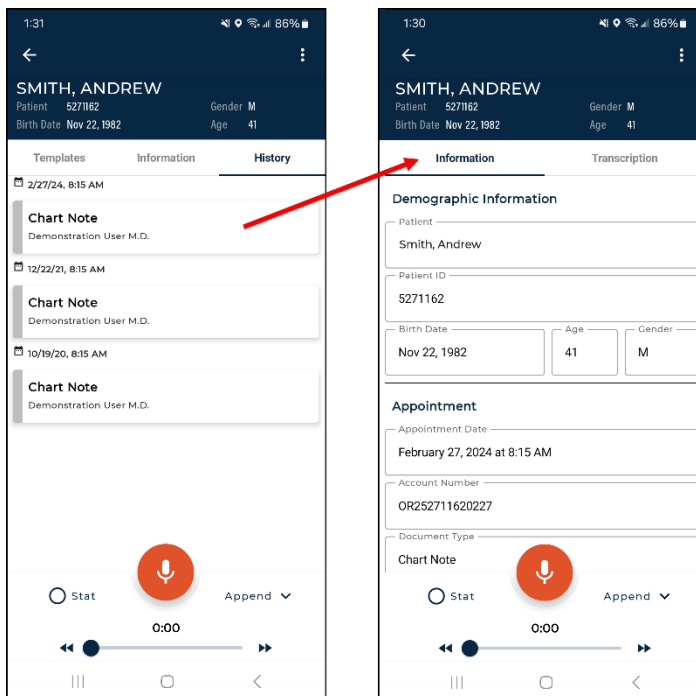

Release Notes

What's New?

DeliverHealth is excited to announce the release of version 3.9 of the eSOne mobile app for Android, bringing improvements and bug fixes to enhance your experience.

Improved Presentation of Historical Transcription Data

We've changed how transcription details are presented when opened from the History tab. The details are now divided into two sub-tabs: Information and Transcription. The Transcription tab will be the default view, allowing you to quickly access the note.

After selecting a record from the History tab, the Information and Transcription tabs will be populated with the selected transcription. Press the back arrow to return to the History tab.

Patient ID Header Fix

We resolved a bug that prevented the Patient ID from displaying in the header for ad hoc dictations. The patient ID manually entered in the Information tab will appear in the blue header.

Minimum Application Requirements

- eScription One Mobile for Android requires an Android operating system that still receives security updates from Android; Android OS9 or higher.
- Internet Access through a wireless Local Area Network (LAN) connection or through a phone service provider. It is strongly recommended to use a Wi-Fi LAN connection when uploading dictations. Minimum bandwidth: LTE/4G data connection; stable Wi-Fi with 3 Mbps download/1 Mbps upload or greater is recommended.
- A microphone for dictating is needed.
- Communicates over port 443 to <https://mobile.escription-one.com> using TLS 1.2.
